INSTALLATION INSTRUCTIONS

PART NUMBER 1002

SAFETY WARNINGS

- This equipment is to be used for the intended purpose of a utility pole climbing step only and is to be installed and used by properly trained professionals.
- Before installation, visually check complete step assembly and pole for damage. Remove from service, destroy and discard any unit if it does not pass this inspection and replace immediately.
- Verify that the (pole) mounting holes are compatibly sized with the pole step (1").
- **THIS PRODUCT IS NOT TO BE USED AS A HOIST POINT**

INSTALLATION INSTRUCTIONS

- Unscrew the Hex nuts at the end of the "J" Bolt to the end of the threads. DO NOT REMOVE THE HEX NUT FROM THE END OF THE BOLT.
- Push the "J" bolt back into the step housing to allow the "elbow" to extend past the slot opening.
- Feed the "J" bolt and sleeve through the proper step opening in the pole and place the plate tightly against the outside wall of the pole.
- Using the hex nut, pull the "J" bolt back through the slot making sure that the "elbow" fits snug against the inside of the pole wall.
- Tighten the hex nut until the step is tight against the outside of the pole wall (approximately 55 ft. lbs. of torque). Do not tighten with an impact wrench.
- Visually check the installed step to verify that it is installed properly.
